Press Release

The Hon'ble Chairman Justice C.V. Nagarjuna Reddy along with Sri Rama Singh Thakur inaugurated a new transparency measure that provides insights into the quality of electricity supply in Andhra Pradesh to the Public. This is achieved by exhibiting an analysis of the Standards of Performance of each DISCOM as per the regulations set forth by APERC. This feature can be accessed at <https://www.aperc.gov.in/SoP>.

This is a first of its kind transparency initiative that makes this analysis available for wider public consumption. The details of accessing this feature, and a brief guide to understanding the data presented is given hereunder.

On clicking the "SoP Analysis of the DISCOMs" link from the side navigation menu bar in the Home page of the website, a page displaying the links to each of the DISCOMs appears. On clicking a DISCOM's link, the user will be redirected to a Google Data Studio page displaying all the SoP areas. Clicking on an SoP area will display the graph showing the performance of the DISCOM. On the top right of the graph will be seen an up arrow and a down arrow. Clicking on the down arrow will display the Circles' performance, Division's performance, Sub-divisions' and Sections' performance in the entire DISCOM. As looking at the graph of all the Sub-divisions and Sections in the entire DISCOM will present a cluttered picture, users can click on a Circle and then click on the down arrow to see the performance of the Divisions within that Circle. Similarly, to see the performance of Sub-divisions within a Division, click on the Division and then click the down arrow, and so on down to Section level. This way, the users can know the performance of a particular section that they may be interested in.

The analysis of the data submitted by the DISCOMs for the period April to September, 2020 only is presented here now. It is the Commission's endeavour to make such analysis for every quarter available to the public on getting the data from the DISCOMs.

Place: Hyderabad
