

Revenue and Tariff Analysis Tool for Electric Utilities (RATE) model
for Andhra Pradesh

Prayas – Pune, a voluntary organisation worked on electricity sector policy and regulation and customised their Revenue and Tariff Analysis Tool for Electric Utilities (RATE) model for Andhra Pradesh. RATE is a spreadsheet based transparent model, which can be used for scenario building with inputs like capacity addition, renewable energy penetration, open access based migration and changes in tariff structure. It is expected that this model will help the Commission, distribution companies and analysts in decision making.
